17. ABSTRACT (MAX. 250 WORDS)

Presents annual data on higher education basic student charges for the fifth consecutive year as reported to the higher education planning and management data survey conducted by the Office of Education. Data for the 4 preceding years were published annually in conjunction with comparative data on higher education salaries under the title *Higher Education Planning and Management Data.* Results of the 1961–62 survey have been published for the first time under two separate titles.

This report presents for the first time a listing of student charges by individual institutions.

Foreword

This is the fifth year the Office of Education has collected and disseminated comparative information on higher education salaries, tuition and fees, and board and room charges.' The first year's publication was developed in response to a request from the National Federation of College and University Business Officers Associations for data useful in budget-making and other planning activities.

Formerly the report was presented as "Higher Education Planning and Management Data." This year it has been divided into two parts. The present publication is concerned with higher education tuition and fees, board, and room; an earlier publication carried information with regard to salaries. For the first time, a listing of fees charged by the individual institutions has been made a part of the report. Of 1,486 responding institutions, 1,302 furnished data on fees. For those which approved publication (about 80 percent of the 1,302), individual data are presented (appendix A--public institutions; appendix B--private institutions).

The responsibility for planning and conducting this report belongs to Dr. W. Robert Bokelman, Chief, Business Administration Section, and Dr. Louis A. D'Amico, Specialist, Business Administration Section. Research and copy preparation were performed by Estelle B. Aubrey, Dana S. Brisbois, Anna Jane Holbrook, Alice R. Pool, Maenylie M. Reed, Ann M. Shimkin, Lucille L. Wellman, and Linda L. Wright.

Chapter 1

Collection and Analysis of Data

The purpose of this report is to provide normative national data with regard to higher education tuition and fees, plus room and board charges, in such a manner that it can serve those officials responsible for educational management. The increased tempo of planning for the mounting numbers of college entrants has necessarily created great interest in the financing of higher education, and the charges to students for various services are an important area for study. Average charges for tuition and fees, room, and board have been reported here in several category groups in order to facilitate comparisons by the individual institution.

For the current study, a questionnaire[1/] designed to obtain information on higher education tuition and fees, room, and board rates (as well as salaries) was mailed in July 1961 to all institutions listed in Education Directory 1960-61, Part 3: Higher Education. Prior to machine tabulations of returns, every effort was made to verify the authenticity of the data. Data appearing in error were checked with the institution's 1960-61 data and its catalog, and in many cases additional information was obtained from the institution. Of the 1,964 institutions requested to complete schedules, 1,486, or 76 percent, responded (public and private).

To secure an indication of the reliability of the data, an abbreviated questionnaire[1/] was sent to 105 nonrespondents, selected on a random basis; and over 92 percent (97 out of 105) of this group responded. Data from the nonresponse group were adjusted (to represent this group) and combined with those of the regular respondents. An analysis shows that the average rates from the adjusted data were, with a few exceptions, generally close to the average rates from the regular data. Because there is a high correlation between institutional size and basic student charges, and because the respondent group had a better representation of the larger-sized institutions than did the nonrespondent group, it could be expected that the unadjusted institutional charges would be somewhat higher than the adjusted ones. The methodology used in the selection of a random sample and in data adjustment is given in detail in chapter 4.

1/ The early questionnaire and the abbreviated questionnaire appear as appendixes in Higher Education Salaries 1961-62 (OE-53015-62).

Presentation of data

The average charges for tuition and required fees of typical full-time undergraduate students during the 1961-62 academic year (for 2 semesters or 3 quarters) are reported by institutional control (public or private), institutional type, size of enrollment, and region[2/]. The average institutional charges (for the 1961-62 academic year) for men's and women's dormitory accommodations and board rates for 5-, 6-, and 7-day food service are presented in the same manner. Individual listings of charges are given in appendix A (public) and appendix B (private) for those institutions indicating approval of publication of their data.

2/ Regional divisions are as follows: North Atlantic: Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont; Great Lakes and Plains: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin; Southeast: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia; and West and Southwest: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oklahoma, Oregon, Texas, Utah, Washington, Wyoming. (Alaska and Hawaii are not included in this study.)

Types of institutions

For purposes of statistical analysis, institutions of higher education are classified into nine major curricular-organizational types within two groups according to the length of programs: (1) institutions whose programs involve at least 4 years of work beyond high school (universities, liberal arts colleges, independently organized teachers colleges, independently organized technological schools, independently organized theological and religious schools, and other independently organized professional schools); and (2) those having programs of less than 4 years (junior colleges, engineering-related technical institutes, and nonengineering-related semiprofessional institutes). Although data for each of the six types in the first group are shown separately in the tables, the data for the three types in the latter group have been combined under the term "junior colleges." These seven headings are defined below.

Universities are institutions which stress graduate instruction and research, confer advanced degrees in a variety of liberal arts fields, and have at least two professional schools not exclusively technological.

Liberal arts colleges are institutions in which the principal emphasis is placed on a program of general undergraduate education.

Teachers colleges are independently organized institutions of at least 4 years which are devoted primarily to teacher training, although their programs may somewhat resemble those of liberal arts colleges or the undergraduate teacher-training curriculums of universities.

Independently organized technological schools are 4-year institutions in which training is predominantly in technical and physical science disciplines, including institutions which emphasize graduate training and research. This category also includes engineering schools.

Theological and religious schools are independently organized professional schools offering programs wholly or principally in the areas of theology, religion, or religious education.

Other independently organized professional institutions are those institutions offering programs directed to one or more fields of specialization, such as medicine, law, or fine arts.

In this report the junior college category comprises all higher education institutions (including technical institutes and semiprofessional schools) offering at least 2 but less than 4 years of work beyond the 12th grade. For brevity this group is sometimes termed "2-year institutions."

Chapter 2

Undergraduate Tuition and Fees

Since institutions vary in the items included under "tuition and fees," the questionnaire for this study requested information on the charge assessed the typical undergraduate full-time student for the 1961-62 academic year of 2 semesters or 3 quarters. The average charges reported for tuition and fees are presented in table 1 for both publicly controlled and privately controlled institutions.

It should be mentioned here that the tuition and fee data presented in the 1960-61 Higher Education Planning and Management Data report were weighted by the number of students, which had not been done in prior issues. The current report reverts to the type of presentation which preceded 1960-61 and presents institutional averages. Thus, 1961-62 institutional charges for tuition and fees are comparable with those presented in Higher Education Planning and Management Data, 1957-58, 1958-59, and 1959-60, but are not strictly comparable with the weighted 1960-61 tuition and fee data. Although 1,486 institutions responded to the questionnaire, only 1,302 institutions reported tuition and fee figures for full-time undergraduate students. Included in the 184 institutions which did not furnish these data were public junior colleges, religious schools, and other institutions without such charges, and strictly graduate schools.

A new feature of this year's study is the projection of estimates for all colleges and universities. This projection, called adjusted data, is based on a combination of data from the respondent group which appear in table 1 and data obtained from a random selection of the nonrespondents. These adjusted data for tuition and fees appear in table 9. The adjusted averages were somewhat lower (1 to 4 percent) than the unadjusted averages from the respondent group appearing in table 1. By use of the adjustment factor in table 9, which is the ratio of adjusted to unadjusted averages, the data in table 1 can be adjusted.

The average charge for tuition and fees to the typical full-time undergraduate student in 1961-62 was $185 in 473 public institutions and $731 in 829 private institutions, or almost four times as large for the latter group. By type, averages ranged from $146 in junior colleges to $334 in "other professional" schools (universities had an average charge of $271), in public institutions; and from $409 in junior colleges to $1,016 in universities, in private institutions. The average tuition and fee charges were highly correlated to institutional size--the smaller the size category, the smaller the average charge. In public institutions averages ranged from $144 for those with fewer than 500 students to $238 for those with 5,000-9,999 students. Averages in private institutions varied from $594 for those with fewer than 500 students to $1,043 for those with 10,000 or more students.

Average tuition and fee charges by region showed variations from $163 in the West and Southwest to $231 in the North Atlantic, for publicly controlled institutions; and from $534 in the Southeast to $943 in the North Atlantic, for privately controlled institutions. Among public institutions, liberal arts colleges in the North Atlantic had the lowest average charge ($74) and one "other professional" school in the Great Lakes and Plains had the highest charge ($430). Among private institutions, theological schools in the Southeast had the lowest charge ($313) and

universities in the North Atlantic the highest ($1,174). By institutional size, ranges in average charges were from $112 by institutions with fewer than 500 students in the Southeast to $334 by those with 5,000-9,999 students in the North Atlantic, for public institutions; and from $449 for institutions with fewer than 500 students in the Southeast to $1,137 for institutions with 2,500-4,999 students in the North Atlantic, for private institutions.

Resident and nonresident charges in public institutions

Public institutions derive approximately one-eighth of their income for educational and general purposes from tuition and fees. Appropriations from State legislatures make up the difference between the amounts charged for tuition and fees in public institutions and the actual amounts required to operate the institutions. (In private institutions the amounts derived from tuition and fees comprise about 45 percent of income for educational and general purposes.) This means that State residents support publicly controlled institutions through taxation. Because the nonresident, or out-of-State, student or his parents are not liable to taxation, the nonresident is expected, in most cases, to pay a surcharge for the privilege of attending a public institution outside his home State. The undergraduate charges to resident and nonresident students by public institutions reporting these data for 1961-62 appear in table 2.

The difference between the average charge to resident and nonresident students was $247 ($188 vs $435). Excluding the charge in the one "other professional" institution which reported tuition and fee data, the difference in average charges varied from $209 for junior colleges ($147 vs $356) to $326 for universities ($268 vs $594). By size of institution, the differences between resident and nonresident averages correlated directly with the size categories. These varied from $201 for institutions with fewer than 500 students ($140 vs $341) to $331 for institutions with 10,000 or more students ($242 vs $573). Regionally, institutions in the Great Lakes and Plains showed the smallest difference between resident and nonresident averages, $212 ($180 vs $392), and those in the North Atlantic showed the largest difference, $313 ($241 vs $554). By type, teachers colleges in the Great Lakes and Plains region showed the smallest difference, $152, and universities in the North Atlantic the largest, $406. By enrollment category, those with fewer than 500 students in the Southeast had the smallest difference, $152, and those with 2,500-4,999 students in the North Atlantic had the largest, $403.

A comparison of the number of public institutions included in table 1 with those in table 2 shows a discrepancy between the number of institutions reporting data. This discrepancy (473 in table 1 and 411 in table 2) results from the fact that a number of junior colleges and several other institutions did not report nonresident fees.

Chapter 3

Room and Board Rates at Responding Institutions

In order to provide an adequate environment for learning, colleges and universities have had to concern themselves with the housing and boarding of students. College dormitories provide students with many opportunities to participate in structured educational and social programs. College dining halls, moreover, furnish students with relatively low-cost, wholesome, balanced meals. Many institutions located in small rural communities would not be able to attract students unless they furnished rooming and dining accommodations. Institutions located in large urban centers also need to be concerned with furnishing these conveniences in order to insure the quality of housing and boarding accommodations necessary for the effective living and learning of their noncommuting students. With rare exception, the charges to students support the cost of the room and board enterprises.

Dormitory room charges

As may be seen in table 3, the average dormitory room charges by publicly controlled institutions for the academic year 1961-62 were $189 for men and $193 for women. In privately controlled institutions the average charges for dormitory rooms were $231 for men and $249 for women. In public institutions, junior colleges had the lowest charges ($145 for men and $153 for women) and universities the highest ($231 for men and $241 for women). In private institutions, theological schools had the lowest charges ($160 for men and $170 for women). Average charges by private universities ranked third in size, the charges being $317 for men and $332 for women. Both private technological and "other professional" schools charged more for dormitory rooms to men and to women than did universities.

For every 10 private institutions furnishing rooming accommodations to men and women, over 6.5 were liberal arts colleges. The largest group of public institutions which provided dormitory accommodations to students was teachers colleges. In public institutions, the average dormitory charge, by region, ranged from $150 in the Southeast to $221 in the Great Lakes and Plains for men, and from $154 to $223 in the same two regions for women. In private institutions the average charge for dormitory rooms varied from $163 to $295 for men, and from $184 to $326 for women, in each case the low in the Southeast and the high in the North Atlantic region.

An analysis of dormitory room charges by size of institution (see table 4) reveals that the smaller-sized institutions had the lower charges and the larger-sized ones the higher charges. This was true for both public and private institutions and for both men and women. Dormitory room charges for the public institutions ranged from $130 for men in institutions with fewer than 500 students to $265 for women in institutions with 10,000 or more students. For the private institutions dormitory room charges were from $180 for men in institutions with fewer than 500 students to $376 for women in institutions with 10,000 or more students.

Text tables A and B contain the number of men and women students accommodated in dormitory rooms, by type and size of reporting institutions, respectively. In all, approximately 1,000 institutions reported dormitory accommodations for students (this figure takes into account noncoeducational institutions). These institutions accommodated more than 811,000 students during 1961-62. Although the number of public institu-

tions reporting dormitory accommodations for students was approximately half the number of private institutions reporting such accommodations, the number of students accommodated by public institutions exceeded by more than 40,000 the number accommodated by private institutions (426,337 vs 384,974).

When related to the average charge figures in tables 3 and 4, it can be seen that public institutions accommodating the larger number of students had the higher average charges; for example, 77 universities with dormitory accommodations for 138,620 men charged an average of $231, and 46 junior colleges with accommodations for 6,524 men charged an average of $145. Private institutions reporting dormitory accommodations for students did not show a similar relationship. Interestingly, public universities furnished dormitory accommodations to over 55 percent of the students accommodated by public institutions, and private liberal arts colleges furnished dormitory accommodations to over 67 percent of the students accommodated by private institutions.

Total number of students housed	226,803		199,534		202,038		182,936	

In all, public institutions accommodated an average of 763 men and 663 women, or a combined average of 1,426 students. Private institutions averaged 361 men and 292 women in their dormitories, or a combined average of 653 students. By type, public universities accommodated an average of 4,201 students in their dormitories (1,800 men and 2,401 women), and private universities accommodated an average of 1,859 students (1,138 men and 721 women). Public junior colleges furnished accommodations to an average of 395 students (142 men and 253 women), and theological schools had the lowest average number of accommodations for private institutions, 196 students (102 men and 94 women).

By institutional size, the average number of students accommodated by institutions was as would be expected--the larger the institution, the larger the number of students (men and women combined) accommodated. However, for the three lowest enrollment categories (below 500, 500-999, and 1,000-2,499), private institutions furnished accommodations to a larger average number of students than did their respective public counterparts. The opposite was true for the largest three enrollment categories (2,500-4,999, 5,000-9,999, and 10,000 or more).

Adjusted dormitory room data appear in table 9. Generally, the adjusted averages for dormitory room charges were, with the exception of private junior colleges, only 1 or 2 percent under the data in table 3. For private junior colleges the adjusted averages were 4 percent higher for men and 4 percent lower for women than the corresponding averages in table 3.

Board rates

The average charges to students for dining accommodations by publicly and privately controlled colleges and universities for the academic year 1961-62 appear in tables 5 and 6 by type and in tables 7 and 8 by enrollment. For the total number of institutions reporting, the average charge in public institutions ranged from a low of $326 for men and women on 5-day week to a high of $380 for men on 7-day week (see table 5). Charges by private institutions did not show the same progression according to length of week as did public institutions (see table 6). For men, the average charge was $348 for those on 5-day week, $438 for those on 6-day week, and $415 for those on 7-day week. For women, the average charge was $346 for those on 5-day week, $426 for those on 6-day week, and $446 for those on 7-day week.

Inasmuch as the majority of the institutions provided 7-day week food service, and because regional and type classifications show very small numbers of institutions reporting 5-day- and 6-day-week data, the analysis will be confined to 7-day-week data.

A ranking of the average 7-day charges by institutional type shows that among public institutions, the technological schools, universities, and liberal arts colleges ranked 1, 2, 3. Among private institutions, both "other professional" and technological schools had average 7-day board charges which were higher than that of universities.

By region, little difference was noted between the average 7-day board charges to men and to women in public institutions. Public institutions in the Southeast charged the lowest ($322 for women and $327 for men), and those in the Great Lakes and Plains the highest ($421 for women and $420 for men). Charges for 7-day food service by private institutions were higher for women. The largest difference, $49, was in the North Atlantic region ($511 vs $462), and the smallest difference, $20, was in the Great Lakes and Plains ($436 vs $416).

The 7-day food service in public institutions correlated highly with enrollment categories for both men and women (see table 7). Charges by public institutions ranged from $337 for those with fewer than 500 students to $460 for those with 10,000 or more students, for men: and from $336 for those with fewer than 500 students to $454 for those with 10,000 or more students, for women. In private institutions 7-day food service charges were again clearly related to enrollment categories. For men, the average charges ranged from $381 for those in institutions with under 500 enrollments to $510 for those with 10,000 or more enrollments (see table 8). Charges to women in private institutions, although they did not show the same straightline relationship as for men, varied from $429 for institutions with fewer than 500 students to $468 for institutions in the 5,000-9,999 and 10,000 or more enrollment categories.

The number of men and women students accommodated by reporting institutions in 1961-62 is presented in text table C by type and in text table D by enrollment size. By combining the number of students accommodated in 5-day- and 6-day-week arrangements and dividing them by the total number of students accommodated in all three categories, it can be seen that public institutions accommodated 12 percent of the men and 10 percent of the women on a 5-day or 6-day basis, and private institutions accommodated 9 percent of the men and 5 percent of the women on less than a 7-day basis. In all, over 691,000 students were provided food service by reporting institutions during 1961-62. Both public and private institutions provided this service in about equal proportions to men and women. Public institutions provided accommodations to slightly over 17,000 more students than did private ones.

The breakdown on total number of students accommodated by type of institution shows that universities had the highest representation in the public group (53 percent of the men and 45 percent of the women) and liberal arts colleges the highest representation in the private group (65 percent of the men and 73 percent of the women). A similar breakdown of data by institutional size reveals that public institutions in the three largest enrollment categories (2,500-4,999, 5,000-9,999, and 10,000 or more) provided accommodations to 3 out of every 4 men and women students; in private institutions, 7 out of every 10 men students and 8 out of every 10 women students were accommodated by institutions in the three smallest enrollment categories (below 500, 500-999, and 1,000-2,499).

In table 9, the adjusted data table, it can be seen that the board charges for 7-day week vary 1 or 2 percent from those shown in tables 5-8.

Chapter 4

An Analysis of Adjusted and Unadjusted Student Charges

The average charges to students for tuition and fees, room, and board as obtained from the original respondents to the survey questionnaire have been presented in the sections preceding this one. Out of 1,964 institutions queried, responses were received from 1,486, or 76 percent. Although a 76-percent rate is a moderately high response, it was felt that it was not necessarily representative of all institutions included in the survey. To test the hypothesis that the data of the respondent group did not differ markedly from those of the entire survey universe, a follow-up study was made of a sample of nonrespondents.

In the follow-up study an abbreviated questionnaire was used to obtain selected data on tuition and fees, room, and board, as well as salaries. The questionnaire was mailed to all nonrespondents with 5,000 or more students and to a random sample of nonrespondents with fewer than 5,000 students, stratified by size, control, and level of offering (whether 4-year or 2-year). The follow-up study included 105 institutions. Of these 105 institutions, 97, or slightly over 92 percent, responded. This high response rate provided a basis for assuming that the data obtained from the sample of nonrespondents are representative of that entire group. By combining the data representing the nonrespondents, weighted by the size factor and inflated to represent all nonrespondents, estimates were derived for the tuition and fees, room, and board charges.

Adjusted and Unadjusted Tuition and Fees

Adjusted average charges for tuition and fees, as shown in table 9, were generally lower than the unadjusted averages. For total public and private institutions, as well as for total public and private 4-year institutions, adjusted averages were 1 percent lower ($527 vs $533, and $597 vs $602, respectively) than the unadjusted averages. For total public and private 2-year level institutions the adjusted average was 3 percent lower ($303 vs $311). The adjusted average for total public institutions was 4 percent lower ($177 vs $185), and for total private institutions the adjusted average was 3 percent lower ($707 vs $731). For 4-year institutions, the adjusted averages were 4 percent lower for public institutions ($199 vs $208) and 3 percent lower for private ($742 vs $766). Interestingly, public 2-year colleges had an adjusted average that was only 1 percent lower than the unadjusted ($144 vs $146), and private 2-year colleges had an adjusted average that was 5 percent lower than the unadjusted ($516 vs $542).

It should be reiterated that these tuition and fee charges pertain to the charges institutions made to typical undergraduate full-time students. This report excluded data from institutions that were composed solely of professional and graduate students.

Adjusted and Unadjusted Room Charges

With the exception of private 2-year institutions, adjusted room charges for men, both by level of institution and by institutional control, were no more than 2 percent lower than their respective unadjusted averages. For all institutions, the adjusted average charge for men was $214, or $2 lower than the unadjusted average. In private 2-year colleges the adjusted average room charge for men was $169, or $6 more than the unadjusted.

The range in difference between the adjusted and unadjusted average room charge for women was from 4 percent ($212 vs $221) in private 2-year colleges to 2 percent in private 4-year institutions, public 4-year institutions, and public 2-year institutions. Overall, the adjusted aver-

age charge for dormitory rooms was $227, $4 lower than the unadjusted.

Adjusted and Unadjusted 7-day Board Charges

Little or no difference was found between the adjusted and unadjusted average 7-day board charges for men. With the exception of public 4-year institutions and total public institutions, the adjusted data averaged from $1 to $5 higher than the unadjusted. For the total public and private 4-year and 2-year institutions, the adjusted average was $1 higher than the unadjusted ($404 vs $403).

The adjusted 7-day board charges for women in all the institutions that would have reported data were $420, $5 lower than the unadjusted average. Only public 2-year colleges showed an increase in adjusted charges over unadjusted ones ($349 vs $347). For the remaining institutional categories, the adjusted average 7-day charges for women were not more than 2 percent lower.

Conclusions

From the comparison of adjusted data with the unadjusted data, it was concluded that:

1. Although a little lower (1 percent for total institutions), the adjusted tuition and fee averages for public and private institutions appeared to be very similar to the unadjusted averages. The largest percentage difference between adjusted and unadjusted averages (5 percent) was found for private 2-year institutions. The extent to which this size difference between the two groups is attributable to the characteristics of the institutions in the sample or to chance is not known. The results, however, do provide support to the idea that there is a relationship between size of institution and size of tuition and fees.

2. Room rates for men and ior women, except for private 2-year colleges, were generally 1 or 2 percent higher for the original respondents than for the estimated universe data. The dollar difference between adjusted and unadjusted averages varied from $6 higher for men in private 2-year colleges to $9 lower for women in private 2-year colleges. These small differences between adjusted and unadjusted averages would tend to indicate minimal differences between the data of the original respondents and the estimated data for the universe.

3. The average 7-day board rates for both men and women showed the smallest percentage difference between adjusted and unadjusted data. The range in percentage differences between adjusted and unadjusted data here varied from 2 percent lower to 1 percent higher. Dollarwise, adjusted averages were from $7 lower to $5 higher than the unadjusted. It would appear from these data that 7-day board rates in the original respondent group were very similar to the 7-day board rates in the estimated universe.

4. Based on the results presented above, it may be concluded that the adjusted charges to students for tuition and fees, room, and board, although generally 1 or 2 percent lower than the unadjusted charges, were very similar to the charges of the 1,486 institutions in the original respondent group.

Table 9.--Comparison of unadjusted[1/] and adjusted[1/] average charges to students--full-time undergraduate tuition and fees; room and board for men and women--by institutional level and control: Contiguous States, 1961-62

Type of institution, by control	Unadjusted data				Data from sample of nonrespondents				Adjusted (estimated) average charge	Adjustment factor (Ratio of adjusted to unadjusted charges)

1/ The names of the institutions that responded to the 1961-62 Higher Education Planning and Management questionnaire, excluding late respondents and those in the follow-up study, appear in this listing. Institutional charges to full-time undergraduate students for tuition and fees, and charges for room and 7-day board accommodations, are included for those institutions which reported such data and gave permission for its publication.

Appendix B. --Basic student charges[1] by private institutions--
tuition and fees (full-time undergraduate students);
room and board charges, men and women--
by institutional type and region: Contiguous States, 1961-62

[1/] The names of the institutions that responded to the 1961-62 Higher Education Planning and Management questionnaire, excluding late respondents and those in the follow-up study, appear in this listing. Institutional charges to full-time undergraduate students for tuition and fees, and charges for room and 7-day board accommodations, are included for those institutions which reported such data and gave permission for its publication.
